

Wisconsin 2002 ILEC and CLEC DSL Service Offering

Digital Subscriber Line (DSL) is a copper based technology that provides a high-speed connection to the Internet. The technology is dependent on the distance of the customer from the serving central office. The 2002 map indicates areas where DSL was reported by ILEC and CLEC providers. Companies noted that DSL continued to be deployed throughout 2003 and early 2004.

Note: The DSL deployment was requested for year-end 2002, however some companies submitted DSL deployment as of mid-2003 where this data was available.
